

Accellion Secure Collaboration™

Accellion® , Inc. provides enterprise-class secure collaboration for security, compliance and enhanced business productivity.

Accellion Secure Collaboration makes it easy for enterprise users to share confidential information with internal and external parties anywhere, anytime, while ensuring enterprise security and compliance. With Accellion, organizations can improve productivity by provisioning users with the ability to securely share and manage proprietary content and confidential personal information directly from a laptop, smartphone, tablet, or other web-enabled device.

Internal and external collaboration is essential for enterprises to conduct business today. Employees share information with colleagues, clients, vendors, and partners to facilitate the flow of information that enables the development, marketing, selling and delivery of products and services. But in a world filled with fierce competition and industry regulation, information needs to be shared securely. Data breaches that result in confidential information getting into the wrong hands are costly for enterprise organizations. Accellion offers a secure collaboration solution that makes it easy for enterprise organizations to securely share information with both internal and external collaborators from anywhere, anytime while ensuring data security and compliance.

Designed for the Enterprise

Accellion Secure Collaboration was created with an understanding of how employees within an organization not only need to share information with one another, but with partners, vendors, contractors, and other outside parties. Using Accellion Secure Collaboration, your employees can efficiently and securely share information with internal and external stakeholders, across the corporate DMZ.

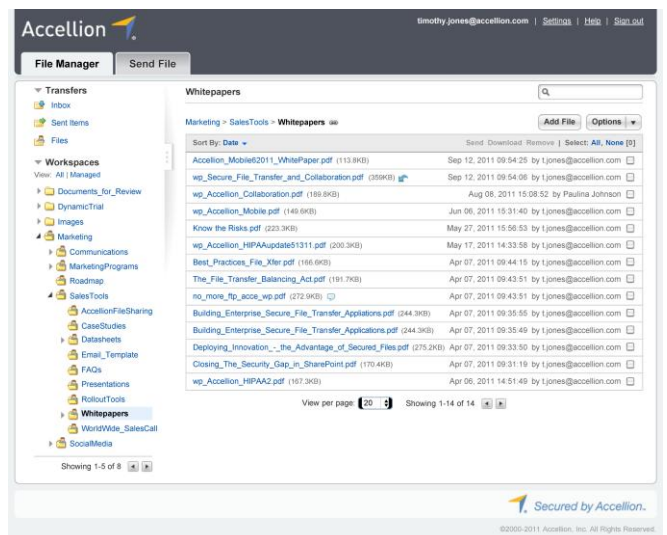

Today's rapidly changing enterprise organizations need highly scalable and flexible solutions that can grow with their businesses. Whether an organization has a single office location or multiple distributed offices around the globe, Accellion Secure Collaboration offers flexible deployment options including virtual, public, private and hybrid cloud, FIPS 140-2, and an on-premise physical appliance enabling enterprises to balance cost, security, and speed of deployment. Organizations can choose the deployment option that best meets their needs today and have the flexibility to move to another deployment option or use a combination of deployment options at a later date.

KEY BENEFITS

- Secure access to files from anywhere, anytime
- Secure collaboration for the enterprise
- Ensure compliance with industry and government regulations
- Increased data security
- Improved business productivity
- Reduced time-to-market
- Reduced IT support costs

Ease-of-Use

With Accellion Secure Collaboration, enterprise users can enjoy an intuitive, easy-to-use user interface, making information sharing and collaboration easy. Using the Accellion secure collaboration solution, enterprises can share project files, images, presentations, spreadsheets, financial documents, product specifications, any file/folder up to 100 GB in size, quickly, easily, and securely to both internal and external stakeholders.

Accellion Secure Workspaces

Accellion Secure Workspaces allow teams to streamline their workflow and keep projects moving forward by allowing stakeholders to review, comment and update files. Users can create hierarchical workspaces with as many nested workspaces as needed and manage user

permissions by assigning individuals or members of an LDAP group as Viewers, Uploaders, Contributors and Managers, depending on the privileges required. Contributors and Managers of a workspace can add or delete workspaces, view workspace properties, send messages, upload or download files, comment, view previous versions and subscribe for notifications from the workspace. Viewers can only download files. Uploaders can upload files, and download files by Managers or Contributors only. They cannot view files uploaded by other Uploaders.

Expired and accidentally deleted workspaces and workspace files can be recovered to ensure business continuity. Using the recovery option Managers, Contributors, or Administrators can recover deleted and expired Workspaces and their files within a configurable time period. Administrators can configure the grace period during which time deleted and expired workspaces and their files are available on Accellion. After the grace period ends, deleted and expired content is no longer recoverable.

Workspace administrators have a number of options to ensure that organizations have a flexible collaboration solution that meets their needs. Workspaces can live forever when administrators set the "Never Expire" option or have a specified duration and expiry date. They can clone workspaces to enhance business productivity. Administrators can set storage caps for workspaces. They can manage who has the ability to create and manage workspaces. Owners of a workspace have the ability to make someone else the manager of their workspace

Comments

Enterprise collaboration is improved when important stakeholders can comment on files stored in a project workspace. With Accellion Secure Collaboration's flexible system, Managers and Contributors can view, add, edit or remove comments to files posted in an Accellion Secure Workspace. And because a project team inevitably creates multiple versions of files, comments are preserved for all versions of a file but are condensed till opened to create a clean workspace for users to view.

Notifications

Soliciting feedback on projects and important files is an important part of any project. With notifications from Accellion, workspace Managers and Contributors know when other workspace members have added files or commented on files. Users can subscribe to receive notifications for any of their workspaces.

Track File Versions

Stakeholders collaborating on documents need to know they are working on the latest version of a document. Accellion helps make file management easier by tracking each version uploaded to the workspace. The system displays the last version of the file in the workspace and then allows users to see previous versions. A newly uploaded file with the same name as an existing file is automatically considered the latest version. Alternatively users can also select the menu option to add a "new version" of a file even if the file has a different name. To keep Accellion Secure Workspaces clean, administrators can set the maximum amount of time for different versions of a file to live.

KEY FEATURES

- Secure workspaces for file sharing and collaboration
- File commenting
- Track file versions
- Workspace notifications
- Role based access to workspaces
- Mobile access
- Extensible APIs
- Activity logs for administrators
- Custom branding
- LDAP integration

Search

The number of files uploaded and folders created during a project can become unwieldy. With the search functionality in Accellion Secure Collaboration, users can easily search from the top-level workspace window or from within a specific workspace to quickly find the file or folder they need to move forward on projects.

Secure File Transfer

Accellion enables business users to send files quickly, easily, and securely without compromising enterprise data security. With most organizations limiting file attachments to less than 10MB, Accellion managed file transfer capabilities offload large files from the email system freeing up email bandwidth and storage and eliminating the need for business users to seek unsecure IT workarounds.

Accellion provides the secure and auditable file transfer processes required for meeting industry and government regulations including Sarbanes Oxley, HIPAA, and FDA.

Mobile Apps

Today's employees are on-the-go. Whether it's a sales representative heading to a client meeting, or an executive at the airport security line, business professionals need mobile access to information. With Accellion Mobile Apps™, users can browse, view, save, edit, upload, and share files from their Accellion Secure Workspace using their iPhone, iPad, BlackBerry, and Android mobile device.

AccellionShare

AccellionShare provides a flexible platform to integrate Accellion secure file sharing and collaboration into an organization's business applications such as Microsoft SharePoint and Office Communicator and Autonomy's iManage. Using the AccellionShare API, organizations can create business applications and websites that integrate with Accellion. Use AccellionShare to upload, download, rename or get files, add, delete or share workspaces, make and delete comments, subscribe to notifications and more.
